Les cartes d'identité sont organisées selon la forme de la caudale et la présence d'échancrures, immédiatement visibles à l'œil nu, sur son bord de fuite.

**BLESSURE DUE
AUX HOMME**

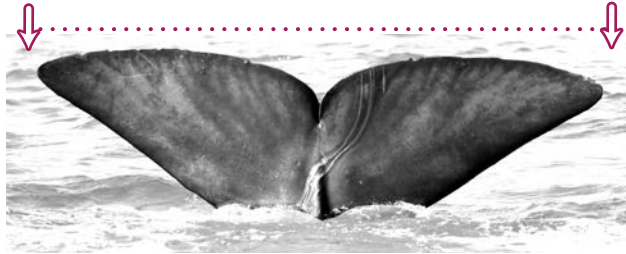

SOUS MARINE

CONVEXE

Pointes de la caudale dirigées vers le bas sur la photo (vers l'avant de l'animal) et franchement sous la tangente à l'arrondi des lobes.

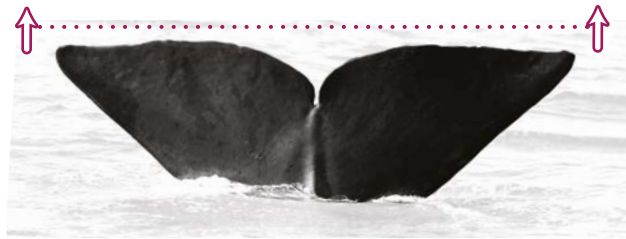

DROITE :

Pointes et lobes alignés horizontalement.

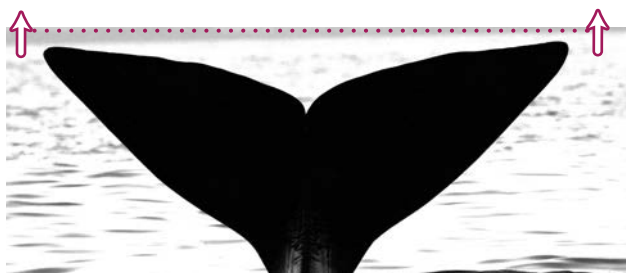

BICORNE

Pointes de la caudale dirigées vers le haut de la photo (l'arrière de l'animal) et qui remontent vers la tangente à l'arrondi des lobes.

FLÈCHE

Pointes de la caudale franchement dirigées vers le haut et dans l'alignement des lobes dont la forme générale est en "V".

AVERTISSEMENT : Chaque cachalot, comme chaque être vivant, est singulier.

La forme de sa nageoire caudale peut ne pas correspondre tout à fait à l'une des 4 catégories.

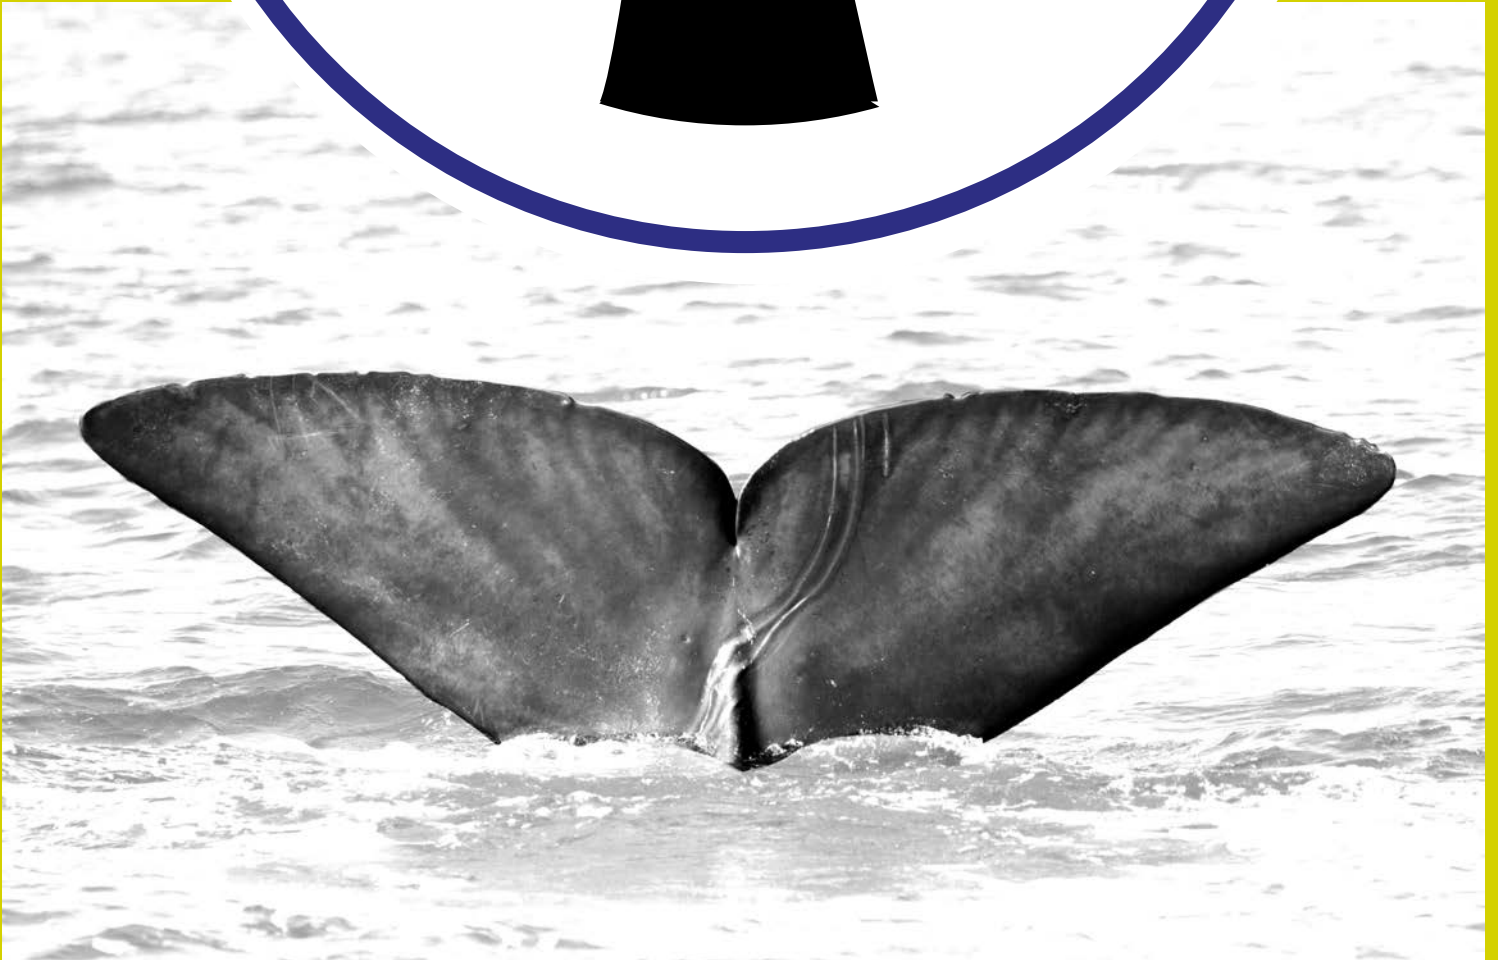

Si il y a un doute sur la forme d'une caudale peu caractérisée, ne pas hésiter à rechercher dans les autres catégories.

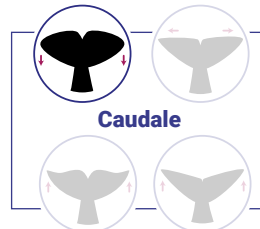

De même, les échancrures retenues comme critère de sélection sont celles qui apparaissent au premier coup d'œil.

Petites échancrures ou marques blanches sur la caudale ou les flancs serviront ensuite à distinguer les individus.

CONVEXE

Pointes de la caudale dirigées vers le bas sur la photo (vers l'avant de l'animal) et franchement sous la tangente à l'arrondi des lobes.
